Small Cuscuta

30

Small Cuscuta is a very common parasite of the roots of many plants. It is a small, white, thread-like plant that grows underground. It has no leaves and no chlorophyll. It obtains its food from the roots of the host plant. It is often found in the roots of corn, cotton, and other crops. It can cause a great deal of damage to the plant, especially if it is found in large numbers. It is a very difficult parasite to control, and it is often found in the roots of plants that have been growing in the same place for many years.
